PROFILE

Web Developer with 8 years of software engineering experience — the last 5 focused on TypeScript, React.js, and Next.js. Frontend lead for an enterprise platform serving ~350 client organizations (~35,000 users): turns business and operational requirements into working applications, tests them (unit and integration), keeps them fast in production, and documents what gets built. Hands-on with application security — weekly automated SAST/DAST scanning in CI — and with a Java/Spring foundation from early full-stack work.

EMPLOYMENT HISTORY

Frontend Engineer (Frontend Lead, Inspigo For Business) | PT Inspigo Inovasi Indonesia (2021 – Present)

- Owned the front end of Inspigo For Business (IFB) as frontend lead in a two-person team with one backend engineer: designed a config-driven architecture where per-tenant config drives component composition and layout at runtime — not just theming — so new clients onboard through configuration instead of a dedicated build; now ~350 client organizations (~35,000 users).
- Analyzed client and business requirements into features delivered from Figma to production, integrated against REST APIs with the backend team.
- Built a reusable form system (React Hook Form + Zod) with full input validation, used by the CMS across every content type, and the admin dashboard's chart and reporting layer (Recharts).
- Managed client and server state with Redux Toolkit and Zustand across multiple apps in the product suite.
- Wrote unit and integration tests (Jest, React Testing Library) as part of every feature; handled bug troubleshooting and production support as a standing responsibility.
- Owned application security in practice: stood up CI/CD on GitHub Actions with weekly automated SAST/DAST scanning (Semgrep, Nuclei, OWASP ZAP), replacing manual SSH deploys with reviewed push-to-deploy; migrated all projects from Vercel to AWS Amplify.
- Monitored and improved performance post-release: Core Web Vitals, code splitting, lazy loading, SSR/SSG with Next.js.
- Built the front end of Inspigo AI (streaming chat UI, WebSocket → SSE, and a CMS for knowledge-base documents) and an AI call-center QA copilot end to end, moving QA coverage from a ~10% manual sample to 100% of sessions.
- Wrote and maintained technical documentation, including Storybook docs for the shared component library.

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Analyzed operational requirements and built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL), centralizing project/warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and enhanced a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking for operations.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018)

- Trained in Java, C#, SQL Server, and JavaScript; built a Library Management System with Java Spring (MVC) and .NET as a final project.

EDUCATION

Physics — IPB University, 2013 – 2017

TECHNICAL SKILLS

- **Core:** TypeScript, JavaScript (ES6+), React.js, Next.js (SSR/SSG), HTML5, CSS3
- **State/Data:** Redux Toolkit, Zustand, Context API, React Hook Form + Zod, REST APIs, WebSocket, Server-Sent Events
- **Architecture:** Config-driven, runtime-composable component architecture; shared component library (Storybook); monorepo
- **Testing:** Jest, React Testing Library, unit & integration testing
- **Security:** Automated SAST/DAST in CI (Semgrep, Nuclei, OWASP ZAP), input validation, reviewed deploys
- **Backend (foundational):** Java, Spring (MVC), PHP (Laravel), PostgreSQL, SQL Server
- **Infra & Tooling:** Git & GitHub, GitHub Actions (CI/CD), AWS (Amplify, S3, Lambda)
- **Practices:** Requirement analysis, technical documentation, bug troubleshooting & application support, Agile/Scrum, cross-functional collaboration
