Profile

Senior Front-End Engineer with 8 years of software engineering experience — the last 5 focused on React, TypeScript, and Next.js. Owns front-end architecture end to end for an enterprise platform serving ~350 client organizations (~35,000 users): config-driven component architecture, reusable form and chart systems, real-time streaming UIs (WebSocket → SSE), and Core Web Vitals as a standing responsibility. Uses AI-assisted development (Claude Code, ChatGPT, Copilot) daily for implementation, refactoring, test writing, and review — and has shipped AI products to production, not just used the tools.

Employment History

Frontend Engineer (Frontend Lead, Inspigo For Business) | PT Inspigo Inovasi Indonesia (2021 – Present)

- Owned the front end of Inspigo For Business (IFB) as frontend lead: designed a config-driven architecture where per-tenant config drives component composition and layout — not just theming — so enterprise clients onboard through configuration instead of a dedicated build; now ~350 client organizations (~35,000 users).
- Built and maintained the shared component library and its Storybook documentation, plus a reusable form system (React Hook Form + Zod) used by the CMS across every content type and the admin dashboard's chart and reporting layer (Recharts).
- Built the front end of Inspigo AI, a RAG-powered learning assistant: token-by-token streaming chat UI (WebSocket, later migrated to Server-Sent Events) and the CMS for managing knowledge-base documents, integrated with REST APIs; thousands of conversations/day at peak.
- Built an AI call-center QA copilot end to end — live-call probing, real-time call analysis, and rubric-based QA evaluation — moving QA coverage from a ~10% manual sample to 100% of sessions scored automatically.
- Kept performance green: Core Web Vitals, code splitting, lazy loading, and SSR/SSG with Next.js; took the product to #1 for domestic brand search.
- Stood up CI/CD on GitHub Actions with weekly automated SAST/DAST scanning, replacing manual SSH deploys with reviewed push-to-deploy; migrated all projects from Vercel to AWS Amplify.
- Ran code review and worked daily with designers, backend engineers, QA, and product in an Agile/Scrum team, delivering features from Figma to production.

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL), centralizing project/warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and extended a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018) — C#, Java Spring, SQL Server

Education

Physics — IPB University, 2013 – 2017

Technical Skills

- **Core:** React, TypeScript, JavaScript (ES6+), Next.js (SSR/SSG), HTML5, CSS3, responsive design, accessibility (WCAG)
- **State/Data:** Redux Toolkit, Zustand, Context API, React Hook Form + Zod, REST APIs, WebSocket, Server-Sent Events
- **UI:** Tailwind CSS, shadcn/ui, Storybook, Recharts, design systems
- **Testing & Quality:** Jest, React Testing Library, ESLint, Prettier, code review
- **Tooling:** Git & GitHub, GitHub Actions (CI/CD), Vite, Webpack, npm/pnpm, AWS (Amplify, S3, Lambda)
- **AI-assisted engineering:** Claude Code, ChatGPT, GitHub Copilot; LLM integration (OpenAI, Bedrock), prompt engineering
- **Practices:** Agile/Scrum, front-end architecture, Figma-to-code, cross-functional collaboration, English (professional)
