Profile

Full Stack Developer with 8 years of software engineering experience: 3 years full-stack on enterprise operational systems (Laravel, Vue.js, PostgreSQL) followed by 5 building TypeScript/React/Next.js products. Product owner of the frontend for Inspigo For Business, an enterprise learning platform serving ~350 client organizations, designed so new clients onboard through configuration instead of a dedicated build. Experienced building AI-powered product interfaces (streaming LLM chat, RAG content management) and owning CI/CD and AWS deployment.

Employment History

Frontend Engineer | PT Inspigo Inovasi Indonesia (2021 – Present)

Inspigo For Business — product owned as frontend lead

- Owned Inspigo For Business (IFB), a B2B enterprise learning platform, as frontend lead in a two-person team (with one backend engineer) — from architecture to production.
- Replaced hardcoded per-client builds with a config-driven architecture where tenant configuration drives component composition and layout, not just theming, so new enterprise clients are onboarded through configuration rather than a development cycle.
- Scaled the platform to ~350 client organizations (~35,000 end users), letting growth follow the sales pipeline instead of the engineering roadmap.
- Built the CMS side that manages IFB's per-tenant UI configuration (React Hook Form + Zod + TanStack Table), and the admin dashboard reporting layer used by nearly every client organization.

Other platform work

- Inspigo AI: built the frontend for a RAG-powered learning assistant — the token-by-token streaming chat UI (WebSocket, later SSE) and the CMS interface for uploading and managing the knowledge-base documents — integrated with the backend's OpenAI/Bedrock + Pinecone pipeline; thousands of conversations/day at peak.
- AI call-center QA copilot: built the full feature set end to end — live-call probing, real-time call analysis, and rubric-based QA evaluation — covering all support

agents and automating 100% of session scoring versus ~10% manual sampling previously.

- Built the shared HLS video player module reused across IFB, Inspigo AI, and all video content.
- Stood up CI/CD (GitHub Actions) with weekly automated SAST/DAST security scanning, replacing manual SSH deploys with reviewed push-to-deploy; migrated all projects from Vercel to AWS Amplify and built S3 media upload pipelines (presigned URLs + Lambda proxy).

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Analyzed operational requirements and built a Shipyard Project Management System end to end (Laravel + Vue.js + PostgreSQL): data model, REST APIs, and UI — centralizing project/warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and extended a Trucking Management Application (logistics), adding GPS-based route and parking-dwell-time tracking to support fleet operations.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018)

- Trained in C#, Java, SQL Server, and JavaScript; built a Library Management System (MVC, .NET + Java Spring) as a final project.

Education

Physics — IPB University, 2013 – 2017

Technical Skills

- **Frontend:** TypeScript, JavaScript (ES6+), React.js, Next.js, Vue.js, Tailwind CSS, Redux Toolkit / Zustand
- **Backend & Data:** PHP (Laravel), REST API design, PostgreSQL, SQL Server, Java Spring / .NET (foundational)
- **AI Product UI:** Streaming LLM chat (SSE, WebSocket), RAG knowledge-base CMS, understanding of RAG flows (OpenAI, AWS Bedrock, Pinecone)
- **Cloud & DevOps:** AWS (S3, Lambda, Amplify), GitHub Actions (CI/CD), SAST/DAST scanning (Semgrep, Nuclei, OWASP ZAP)
- **Practices:** Requirement analysis, enterprise/multi-tenant architecture, testing (Jest, React Testing Library), Agile/Scrum, documentation
