PROFILE

Frontend Engineer with 8 years of experience, 4+ of them building complex React/Next.js applications for enterprise products serving tens of thousands of users. Owns frontend architecture end to end — reusable component systems, state management, performance (Core Web Vitals, code splitting, lazy loading), and CI/CD — reviews code and helps junior engineers level up, and has shipped production AI-assisted features (RAG pipelines, LLM integration) as a working practice, not a side experiment.

EMPLOYMENT HISTORY

Frontend Engineer | PT Inspigo Inovasi Indonesia (2021 – Present)

- Designed a config-driven UI architecture — per-tenant component composition and layout, not just theming — for Inspigo For Business, now serving ~350 enterprise clients (~35,000 end users).
- Built a reusable form system (React Hook Form + Zod) and the admin dashboard's chart/reporting layer, both integrated against REST APIs and used across nearly every client organization.
- Built Inspigo AI's RAG pipeline (S3 → Pinecone → OpenAI + Bedrock fallback) and owned the streaming chat UX — direct, hands-on experience evaluating and shipping AI-assisted tooling in production, on a 5-person team.
- Owned performance and reliability: green Core Web Vitals, code splitting/lazy loading as standard practice, and weekly automated security scanning (SAST/DAST) on top of GitHub Actions CI/CD, replacing manual SSH deploys with push-to-deploy.
- Led code review and cross-functional planning with designers, backend engineers, and product; mentored teammates on the 5-person team and wrote the technical documentation the team builds on.
- Owned production troubleshooting end to end — from incident triage through root-cause fixes — for a product with ~35,000 active end users.
- Migrated all projects from Vercel to AWS Amplify; built S3-based media upload pipelines (presigned + Lambda-proxied).

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL), including REST API design consumed by the frontend, centralizing project/warehouse tracking and closing a prior fraud vector.
- Maintained and extended a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018)

- Trained in C#, Java, SQL Server, and JavaScript.
- Built a Library Management System (MVC, .NET + Java Spring) as a final project.

EDUCATION

Physics — IPB University, 2013 – 2017

TECHNICAL SKILLS

- **React:** React.js, Next.js, Hooks, Context API, Redux Toolkit / Zustand
- **Languages:** JavaScript (ES6+), TypeScript
- **CSS:** CSS3, Flexbox, Grid, responsive design, Tailwind CSS
- **Tooling:** Next.js build pipeline, Git & GitHub, GitHub Actions (CI/CD)
- **API/Testing:** REST API integration, Jest, React Testing Library
- **Performance:** Code splitting & lazy loading, SSR/SSG, Core Web Vitals optimization, System Design
- **AI:** Prompt engineering, RAG pipeline design, LLM integration (OpenAI, Bedrock) — production experience adopting AI-assisted tooling responsibly
- **Practices:** Code review, Agile/Scrum, documentation, cross-functional collaboration

Note: primary styling experience is Tailwind CSS rather than Sass/Less or CSS-in-JS (styled-components/Emotion); Next.js has covered build tooling day to day rather than hand-rolled Webpack/Babel configs.
