Dear Hiring Team,

I'm writing to apply for the Frontend Developer (React JS) role. I've spent the last four-plus years building production React and Next.js interfaces day to day, and the role's core — reusable components, REST API integration, and close collaboration with design/backend/QA — is close to exactly what I already do.

At PT Inspigo Inovasi Indonesia, I build and maintain the frontend for an enterprise product now used by roughly 350 client organizations and 35,000 end users, including a config-driven UI architecture (reusable components across tenants rather than one-off screens) and a reusable form system (React Hook Form + Zod) wired to backend REST APIs. I work with Redux Toolkit and Zustand for state management depending on the project, take Figma designs to pixel-accurate responsive UI, and take part in code review and sprint planning as part of a small, fast-moving Agile team. Earlier in my career I also worked backend-adjacent (PHP/Laravel, PostgreSQL), which makes API integration and debugging across the frontend/backend boundary second nature rather than a guessing game.

I'd welcome the chance to talk about the role and how I can contribute to your team.

Thank you for your time and consideration.

Saepul Malik
