PROFILE

Frontend Developer with 8 years of experience, 4+ of them building scalable, high-performance React/Next.js applications for a consumer-facing enterprise platform serving tens of thousands of users. Builds reusable, modular components, integrates closely with backend teams on REST APIs, and owns performance (Core Web Vitals, code splitting, lazy loading, image optimization) as a standing responsibility. Reviews code, shares technical decisions, and mentors teammates as part of day-to-day work.

EMPLOYMENT HISTORY

Frontend Engineer | PT Inspigo Inovasi Indonesia (2021 – Present)

- Designed a config-driven UI architecture — reusable, modular component composition rather than one-off screens — for Inspigo For Business, now serving ~350 enterprise clients (~35,000 end users).
- Built a reusable form system (React Hook Form + Zod) and the admin dashboard's chart/reporting layer, both integrated against REST APIs designed in collaboration with backend engineers.
- Translated Figma designs into pixel-accurate, responsive, accessible UI (WCAG practices) across Inspigo's products.
- Owned performance as an ongoing responsibility: green Core Web Vitals, code splitting/lazy loading, image optimization, and GitHub Actions CI/CD — including weekly automated security scanning ahead of every deploy.
- Led code review and technical discussions with designers, backend engineers, and product; mentored teammates on a 5-person team and wrote the technical documentation the team builds on.
- Troubleshoot and resolved frontend issues across development, staging, and production for a live product with ~35,000 active users.

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL), including REST API design consumed by the frontend, centralizing project/warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and extended a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018)

- Trained in C#, Java, SQL Server, and JavaScript.
- Built a Library Management System (MVC, .NET + Java Spring) as a final project.

EDUCATION

Physics — IPB University, 2013 – 2017

TECHNICAL SKILLS

- **Core:** JavaScript (ES6+), TypeScript, HTML5, CSS3, responsive design

- **React:** React.js, Next.js, React Hooks, Redux Toolkit / Zustand, Context API
- **API/Architecture:** REST API integration, async client-server architecture, React Hook Form + Zod
- **Performance:** Code splitting & lazy loading, image optimization, Core Web Vitals, SSR/SSG
- **Tooling:** Git & GitHub, GitHub Actions (CI/CD)
- **Practices:** Code review, Agile/Scrum, accessibility (WCAG), mentoring, documentation, cross-functional collaboration

Note, in the interest of an accurate match: hands-on framework depth is Next.js, not Remix; and domain background is enterprise L&D/SaaS (Inspigo), not e-commerce/marketplace/fintech directly — though Inspigo For Business is itself a consumer-facing platform at comparable scale (~35,000 end users).
