Profile

Next.js Developer with 8 years of software engineering experience — the last 5 focused on Next.js, React, and TypeScript. Frontend lead for an enterprise platform serving ~350 client organizations (~35,000 users): reusable components aligned to a design system, validated form flows on top of REST APIs, real-time UIs, and performance kept green in production. Leads code review, owns CI/CD, and works daily with UI/UX, backend, and QA in Agile/Scrum teams.

Employment History

Frontend Engineer (Frontend Lead, Inspigo For Business) | PT Inspigo Inovasi Indonesia (2021 – Present)

- Owned the front end of Inspigo For Business (IFB) as frontend lead, turning UI/UX designs and user stories into production features with a backend engineer; designed a config-driven Next.js architecture where per-tenant config drives component composition and layout, so clients onboard through configuration instead of a dedicated build — now ~350 client organizations (~35,000 users).
- Built and maintained the shared component library with Storybook documentation, keeping UI consistent with the design system across products.
- Built a reusable form system (React Hook Form + Zod) with schema-based validation and API error handling, used by the CMS across every content type, plus the admin dashboard's reporting layer (Recharts).
- Co-built (team of 3) `@inspigoid/web-auth`, an internal package powering single sign-on across Inspigo web apps — one login for all products, access and refresh tokens stored in cookies, with token refresh to keep user sessions alive.
- Built the front end of Inspigo AI: token-by-token streaming chat UI (WebSocket, later migrated to Server-Sent Events) and the CMS for managing knowledge-base documents, integrated with REST APIs.
- Built an AI call-center QA copilot end to end — live-call probing, real-time call analysis, and rubric-based QA evaluation — moving QA coverage from a ~10% manual sample to 100% of sessions scored automatically.
- Optimized performance: Core Web Vitals, code splitting, lazy loading, SSR/SSG with Next.js.
- Lead code review and mentor teammates on frontend standards; stood up CI/CD on GitHub Actions with automated security scanning, replacing manual SSH deploys, and migrated all projects from Vercel to AWS Amplify.

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL) — from requirement analysis to REST APIs and UI — centralizing project and warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and extended a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking; fixed defects reported by operational users.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018) — C#, Java Spring, SQL Server

Education

Physics — IPB University, 2013 – 2017

Technical Skills

- **Core:** Next.js (App Router, SSR/SSG), React, TypeScript, JavaScript (ES6+), HTML5, CSS3, responsive design, component-based development
- **State/Data:** Redux Toolkit, Zustand, Context API, React Hook Form + Zod, REST APIs & JSON, WebSocket, Server-Sent Events, cookie-based auth (access/refresh tokens)
- **UI:** Tailwind CSS, shadcn/ui, Storybook, Recharts, design systems
- **Testing & Quality:** Jest, React Testing Library, ESLint, Prettier, debugging and defect fixing, code review
- **Tooling:** Git & GitHub, GitHub Actions (CI/CD), npm/pnpm, AWS (Amplify, S3, Lambda)
- **Also:** Vue.js, Laravel, PostgreSQL
- **Practices:** Agile/Scrum, Figma-to-code, collaboration with UI/UX, backend, and QA, English (professional)
