Profile

Frontend Engineer with 8 years of software engineering experience: 3 years full-stack (PHP, Vue.js, PostgreSQL) followed by 5 focused on React/Next.js and AI-integrated web applications. Designs config-driven UI architecture and reusable systems (forms, charts, AI chat interfaces) for enterprise products, combining an analytical background (Physics) with hands-on ownership of platforms serving tens of thousands of users.

Employment History

Frontend Engineer | PT Inspigo Inovasi Indonesia (2021 – Present)

- Owned Inspigo For Business (IFB) as frontend lead: designed and built a config-driven UI architecture — driving per-tenant component composition and layout, not just theming — so enterprise clients onboard through configuration instead of a dedicated build; now serving ~350 enterprise clients (~35,000 end users).
- Built the frontend for Inspigo AI's RAG-powered assistant — streaming chat UI (WebSocket, later SSE) and the CMS for managing knowledge-base documents — integrated with the backend OpenAI/Bedrock + Pinecone pipeline; thousands of conversations/day at peak.
- Built a reusable form system (React Hook Form + Zod) powering the CMS across every Inspigo content type, and the admin dashboard's chart/reporting layer (Recharts) — both now used by nearly every client organization.
- Built an AI call-center QA copilot end to end — live-call probing, live analysis, and QA evaluation (real-time transcription + rubric-based auto-evaluation) covering all support agents, automating 100% of session scoring versus ~10% manual sampling previously.
- Stood up CI/CD (GitHub Actions) and weekly automated security scanning (SAST/DAST with AI-formatted reports), replacing manual SSH deploys with push-to-deploy.
- Migrated all projects from Vercel to AWS Amplify and built S3-based media upload pipelines (presigned + Lambda-proxied).
- Also owned: SEO (#1 domestic brand search, green Core Web Vitals), analytics/tracking (GTM/GA/MoEngage), and the shared video player module powering all Inspigo video content.

Full Stack Developer | PT Praweda Sarana Informatika (Outsourced by PT Indocyber) (2018 – 2021)

- Built a Shipyard Project Management System from the ground up (Laravel + Vue.js + PostgreSQL), centralizing project/warehouse tracking and closing a prior fraud vector in the inquiry/quotation process.
- Maintained and extended a Trucking Management Application, adding GPS-based route and parking-dwell-time tracking.

Full Stack Developer Trainee | PT Indocyber Global Technology (2018)

- Trained in C#, Java, SQL Server, and JavaScript.
- Built a Library Management System (MVC, .NET + Java Spring) as a final project.

Education

Physics — IPB University, 2013 – 2017

Technical Skills

- **Architecture & Concepts:** SSR/SSG, State Management Patterns, Web Performance Optimization, System Design, Code Splitting & Lazy Loading, Design Systems
- **AI Integration:** Prompt Engineering, System Prompt Design, RAG Pipeline Design, LLM Integration (OpenAI, Bedrock), Streaming Delivery (WebRTC, SSE)
- **Frontend:** HTML5, CSS3, JavaScript (ES6+), TypeScript, React.js, Next.js, RTK / Zustand, Tailwind CSS, React Hook Form + Zod, shadcn/ui, Git & GitHub
- **Backend & Infra:** AWS (S3, Lambda, Amplify), GitHub Actions (CI/CD), GTM / GA / MoEngage
- **Soft Skills:** Agile/Scrum, Cross-functional Collaboration, Documentation Writing
